

In-VEHICLE CHARGING

Change Your Technology – Not Your Battery

Today's battery charging technology provides more options than ever before to power your electric lift trucks. Spare batteries are no longer the only option to provide the power needed to operate lift trucks beyond the standard 8-hour shift. Today's intelligent chargers are able to recharge batteries differently than previous conventional charger models; allowing operations to eliminate spare batteries!

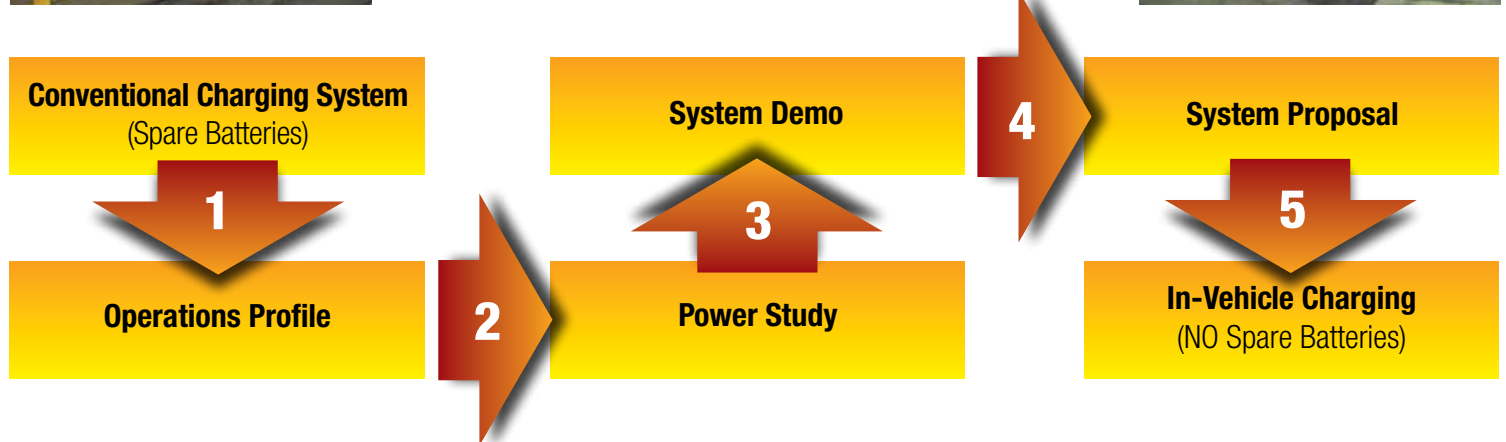

Before

After

The Road to In-VEHICLE CHARGING

ELIMINATE SPARE BATTERIES

CONVENTIONAL CHARGING SYSTEM (Spare batteries create many challenges)

- **SAFETY CONCERN** – created during the changing of heavy industrial batteries from lift trucks
- **LOST PRODUCTIVITY** – battery changes can take approximately 10-20 minutes to complete
- **LOST FLOOR SPACE** – warehouse/manufacturing space must be consumed to accommodate battery storage and change-out equipment
- **PROPER MAINTENANCE** – batteries require regular maintenance and therefore labor hours and repair costs increase with the number of batteries in operation

IN-VEHICLE CHARGING SYSTEM (No spare batteries)

- **BATTERY REMAINS IN TRUCK** – recharge during scheduled, available down time. Eliminate safety concerns associated with battery changing
- **INCREASE PRODUCTIVITY** – lifts only stop at scheduled times, not battery changes
- **INCREASE FLOOR SPACE** – eliminate battery changing infrastructure
- **REDUCE MAINTENANCE COSTS** – 1 battery per truck
- **REDUCE AC POWER COSTS** – battery management (Intelligent Charging) and HF technology
- **INCREASE USAGE AWARENESS** – charging system software monitors and records power system usage. Ensures proper system management and maximum battery life

Proud Member of

Johnson Battery Company

JBC POWER SYSTEM

DEKA BATTERY

- 5 Year Opportunity Charge Warranty
- 4 Year Fast Charge Warranty
- Exclusive IPF® Technology (Individual Plate Formation)

AMETEK CHARGER

- Opportunity / Fast Charge w/ High Frequency Technology
- Battery Management (BID Module)
- Wireless Reporting Capability (DataLink²)

JBC SUPPORT

- Ultra Care Battery / Charger Management Program
- Product Support Guarantee Program
- 4 Generations of Battery / Charger Experience

OUR PURPOSE

Johnson Battery Company is in the business of helping customers create the most economical approach to powering their electric lift trucks and pallet jacks. We partner closely with our customers to create a positive Owning Experience after the sale.

Contact us today to receive your no-charge operation analysis, power study and demo to determine if your operation can eliminate spare batteries.
